

Learn by doing

- Hands-on assembly language programming in class
- You MUST have your own laptop
- You MUST have PCSpim/QtSpim installed and tested

Learn by doing

- There are lots of details you need to know to write assembly code
- Most books address each topic/concept in detail *one at a time*
 - For such books, it takes some time before you can even start writing assembly code because there are so many details
- I'll take a different route and try to illustrate concepts in such a way that it's more hands-on
