

01. Print Statements and C-Strings

Why the big, fat right margin? For your notes. Get busy.

Objectives

- Print strings and characters using `std::cout`
- Use the `\n`, `\t`, `\"`, `\'`, `\\` characters
- Use `std::endl` to force newline
- Write multiple print statements

In this set of notes, we learn to print strings and characters.

A quick advice to ease the pain of learning your first programming

language: Type the program **exactly** as given. Even your spaces and blank lines must match the spaces and blank lines in my programs.

Let's begin ...
