01. Print Statements and C-Strings

Objectives

- Print strings and characters using std::cout
- Use the \n, \t, \", \', \\ characters
- Use std::endl to force newline
- · Write multiple print statements

In this set of notes, we learn to print strings and characters.

A quick advice to ease the pain of learning your first programming language: Type the program **exactly** as given. Even your spaces and blank lines must match the spaces and blank lines in my programs.

Let's begin ...

Why the big, fat right margin? For your notes. Get busy.
