Exercise. Write a program that prints the following:

```
hello columbia
```

Exercise. Write a program that gets the computer to greet you:

```
hello dr. liow, my name is c++.
```
(replace my name with yours ... you're probably not "dr. liow").

Exercise. Debug (i.e., correct) this program by hand and then verify by running it with your C++ compiler.

```
#include (iostream)

int main()
(
    std;;cout < "Hello, world!\n";

    return 0;
)
```
